

CONVERSIONS

**NI Electric Drives and Control Conversions**

*NI Electric Control & Drive Train Conversion.*

For over 30 years, Nebraska Irrigation (NI) has been manufacturing and supplying drive train and control conversions. Our conversion kits utilize components that are field tested to handle the toughest conditions. They are also tailored to specific irrigation systems. In fact, we've supplied conversion kits for virtually every type of irrigation system ever made.

NI control packages consist of individual control panels and control boxes or complete electrical system conversions as required.

NI control packages include:

- Pivot main panels.
- Collector rings.
- Intermediate, stall, and last tower control boxes.
- Required wire.
- All necessary hardware and mounts, as needed.

*NI Electric Drive & Control Conversion utilizing existing system base deck and structure.*

- Increase the life of a structurally sound irrigation system.
- Save money by rebuilding machines instead of replacing them.
- NI controls and drives make systems operate like new.
- NI's heavy duty controls and linkage will improve an older system's alignment.
- Towable or non-towable conversions.

*NI Electric Pivot Conversion, including pivot panel with options, collector ring, & accessories.*

**Save by Converting**

Converting, improving, and updating irrigation systems has been a primary focus of Nebraska Irrigation for over three decades. Our experience and tested techniques will provide a dependable operation.

**COMPONENTS ARE FIELD TESTED**

**Due to the variety of machines in use, NI offers many different conversion options. Please contact our sales office for more information.**
