Netafim Drip Products

Successful Drip Irrigation Systems

At the heart of the system is the integral dripper. Netafim's integral drippers are injection molded using state-of-the-art precision machinery.

Each integral dripper includes a precision molded filter. The position of the filter ensures that water is not drawn from the wall of the lateral, where sediment is most likely to form.

NI offers a full line of drip irrigation products. Contact us with your requirements.
